Dear Hiring Manager,

I am interested in the Front-End Web Developer position advertised on Dice, Job #: 02720-0009224940.

I am a self-taught and motivated web-developer eager to use my passion for web development to build creative, user-centric solutions.

I am proficient in Python, HTML5, CSS and JavaScript and have worked on jQuery, Bootstrap, Knockout JS (MVVM) frameworks.

I recently built a web application using Knockout JS that displays a map of New York City and various points of interest. I used the Knockout framework to implement dynamic UI update to create a rich and responsive display and provide the user with the option to filter the points of interest displayed on the map. I ensured a responsive user interface by designing components for desktop, tablet, and mobile browsers using media queries.

I am a results-oriented software professional with excellent problem-solving skills. An avid learner passionate about technology, I am constantly looking to upgrade my skill set to keep current with the industry.

Proficient in web technologies with a broad range of experience in both front and back-end. I enjoy the creative aspect of software development and take pride in a job well done. I believe development is a collaborative process and enjoy working as part of a team. I am comfortable in a smaller team size as I believe communication is more seamless in a smaller group and one can make a more significant and meaningful contribution to the project.

My resume is enclosed for your review. Thank you for your consideration.

Regards
Priya Balakrishnan
